

IdeaXchange SSO — JIT Overview

AmeriLife · amerilife.com · Technical reference for the IT team

IdeaXchange uses a **headless architecture**: the public site at **amerilife.com** (Next.js), content in **WordPress**, and login via **Microsoft Entra ID**. With **Just-in-Time (JIT)** provisioning, members sign in with Microsoft and access is created on first login — no SCIM sync into WordPress and no auth plugins.

1. Architecture overview

System	What it does	IT configures
Entra ID	Identity — who can sign in and which groups they belong to	App registration, redirect URI, user/group assignments
Next.js frontend	IdeaXchange member experience at amerilife.com	Environment variables (see section 4)
WordPress	Content library — articles, leaderboard, carrier, recruiting	Editorial content; members do not log in here

2. JIT login flow

Summary: Entra runs login. The frontend enforces access. WordPress holds content. Members never log into WordPress. Access is managed via Entra groups.

3. Entra configuration checklist

Item	Value
Redirect URI (production)	https://amerilife.com/api/auth/callback/microsoft-entra-id
Redirect URI (local dev)	http://localhost:3000/api/auth/callback/microsoft-entra-id
Issuer	https://login.microsoftonline.com/{tenant-id}/v2.0
App roles (examples)	IDEAXCHANGE_SALES · IDEAXCHANGE_RECRUIT · IDEAXCHANGE_CARRIER · IDEAXCHANGE_LEADERSHIP · IDEAXCHANGE_ADMIN

4. Environment variables

Variable	Example / purpose
AUTH_SECRET	Random secret for session signing
AUTH_URL	https://amerilife.com
NEXT_PUBLIC_SITE_URL	https://amerilife.com
AUTH_MICROSOFT_ENTRA_ID_ID	Entra Client ID
AUTH_MICROSOFT_ENTRA_ID_SECRET	Entra Client Secret
AUTH_MICROSOFT_ENTRA_ID_ISSUER	Tenant issuer URL
AUTH_MICROSOFT_ENTRA_ID_TENANT_ID	Restrict sign-in to AmeriLife tenant
